

## ABSTRACT OF THE INVENTION

A terminal block for use in an uninterruptible power supply comprises a first portion that includes a plurality of stalls, each of the plurality of stalls having an aperture, and at least one socket positioned in the aperture, the at least one socket arranged to accept a wire from  
5 internal portions of the uninterruptible power supply, and a second portion removably connectable to the first portion, the second portion including a plurality of stalls, a plurality of electrical ports, an electrical port positioned in each of the plurality of stalls, and at least one connector pin positioned within one of the plurality of stalls to connect to the at least one socket through the aperture.
